PrivacyScore: Tracking the trackers

Max Maass*, Dominik Herrmann°, Pascal Wichmann°, Henning Pridöhl°

* Secure Mobile Networking Lab (SEEMOO), TU Darmstadt

° Security in Distributed Systems (SVS), Uni Hamburg

PrivacyScore

- Checking the privacy-friendliness of a website
  - Trackers, Cookies
  - HTTPS, STARTTLS (Mail)
  - General Security (security headers, …)
  - Information leaks (.git, sqldump.db, …)
- Compare results from multiple websites
- Create rankings

PrivacyScore

- Checking the privacy-friendliness of a website
  - Trackers, Cookies
  - HTTPS, STARTTLS (Mail)
  - General Security (security headers, …)
  - Information leaks (.git, sqldump.db, …)
- Compare results from multiple websites
- Create rankings
- Get threatened with the hackerparagraph by scanning targets

Technology

- **Django** Web-Frontend & Backend
- **OpenWPM** to automatically access websites
- **testssl.sh** for TLS-Analyse
- **Celery** as a distributed task queue
- **EasyList** + **EasyPrivacy** als tracker database
- **Sentry** for catching the inevitable errors
- ❤ FOSS

What we're looking for:

○ **More checks** (especially those that don't land us in jail)

○ **More lists** of interesting websites

○ **An API**

○ **Sounds interesting**? Get hacking: GitHub.com/privacyscore
